2026 HURRICANE OUTLOOK

DEVELOPED IN PARTNERSHIP WITH 
space solutions

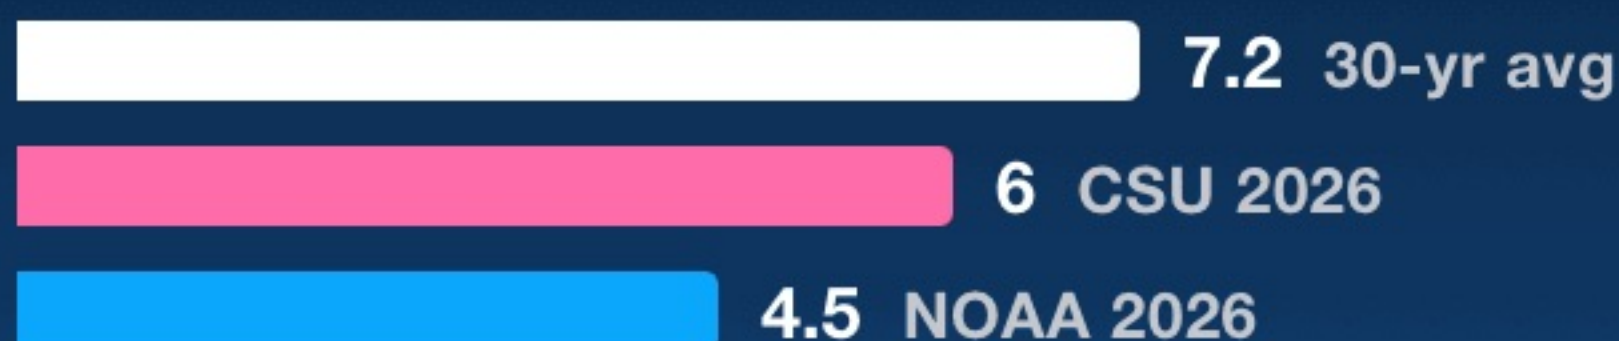

Both forecasters agree: it'll be quiet.

NOAA and CSU both put 2026 at or below the 30-year average on every metric. (White = average; each forecast bar falls short of it.)

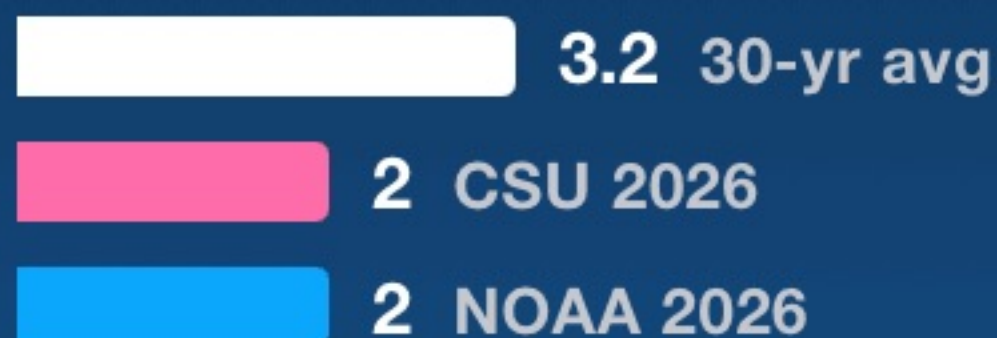

Named storms

Hurricanes

Major hurricanes

WHY COUNT ISN'T THE METRIC

2022 produced fourteen
named storms. One
of them was Ian.

DEVELOPED IN PARTNERSHIP WITH  **esa**
space solutions

~\$50bn

in insured losses from a
single event — in a season
that fell right on the long-run
mean.

Swipe →

Loss years are made by **one storm**, not thirteen.

Cat reinsurance is priced for the tail, not the mean.

**Below-average season $\neq$
below-average loss year.
Plan for the single event.**
